NPIC/TSG/RED-247-70  
8 October 1970

MEMORANDUM FOR: Chief, Technical Services Group, NPIC

ATTENTION : Special Assistant, TSG/NPIC

SUBJECT : Review of Project [ ] Report

REFERENCE : PSG/AID-290/70, 29 September 1970, Review and Comments  
on Project ASPIN Report

1. We have reviewed the full project [ ] report as well as the attachments to the referenced memo and can find no reason, from an R&D point of view, to take exceptions to any of the recommendations made therein.

2. We certainly agree with the [ ] recommendation concerning the need for a more concentrated R&D effort, particularly in the computer graphics field and their concept of planned experimentation. This is consistent with RED's actions in recent fiscal years to maintain an aggressive yet modest R&D program in information technology from both the analysis and experimental or applications development of state-of-the-art peripheral equipment. Obviously, it is essential that this be in close cooperation between RED and AID in meeting this objective, since there is a fine line between needed R&D analysis, experimentation, and operational implementation. The last function, of course, is the direct responsibility of AID.
